Automated Watering
Set and forget or change sprinkler cycles easily.

Automated Light & Power
Allows lighting heating and cooling to respond to you efficiently in every room and trim consumption.

Multiple Telephony
Have a phone in every room.

BRING YOUR HOME TO LIFE

Smart Environments lets you make the most of your home, digital technology and the environment. Combining phone, fax-lines, Pay TV cabling, audio systems, computer connections, Internet capability and security in a single nervous system called "structured cabling" with a central controller or "cortex," a smart environment improves quality of life for the whole family and adds real investment value and future flexibility to your home.

Bringing your home or office into the digital world means you can control the consumption of power, water, and resources allowing you to save while helping to create a more sustainable environment.

You can make the most of the internet by building virtual networks to communicate and share information with families and friends. What's more, you can access all these devices and control them from anywhere in the world.

With the basic smart environment network and computer cortex in place you can add devices and systems when ever you're ready. You home is ready for the information highway.

ABOUT US

Smart Environments are a team of computer architects, engineers, town planners, landscape architects and systems experts who have combined their skills to offer a unique capability for the digital and ecological advancement of residential and commercial property development.

Think of us as digital architects helping you make the most of technology and the environment. Just as you wouldn't think of designing a quality home without an architect - we can help you design the perfect home or workplace.

Our methodology is simple. We contact an initial design review- usually a day's work. We install a smart network in your home or office that will support new smart digital devices. We assist you select specific devices that you need right now (or consult again to add new devices in the future). We run a care and maintenance program and will advise you of any additional savings as new research comes to light.

We can link you and your family members to a virtual private network so you can share resources and family photos, records, and projects and enjoy all the benefits of the digital world easily and cost effectively.

We also offer a range of smart environment packages to suit you're the needs of you and your family and your type of home.

For safety, conservation, enjoyment, investment, and quality of life -
